

# Reinforcement learning and robot navigation

Charles Dufour

Supervisors: Prof. F. Eisenbrand, Jonas Racine

June 20, 2018

## The problem

- Framework: a raspberry pi 3 robot which can follow lines
- The task: the robot should adapt its speed with respect to traffic lights
- How: using Reinforcement Learning (RL) and Markov Decision Process (MDP)

# The task

- Part I: theoretical background
- Part II: results from first implementations

# Reinforcement learning

The agent's job is to find a behavior that maximizes the long-run sum of values of the rewards.

## States

States are defined in function of:

- distance to the traffic light
- color of the traffic light
- time spent seeing the color of the traffic light
- previous action

## Speeds

0,20,30,...,70

# Thank you !
